Most Agile transformations fail!

Stop doing Agile!

@martincronje

How do you build software?

Agility vs. Big Bang

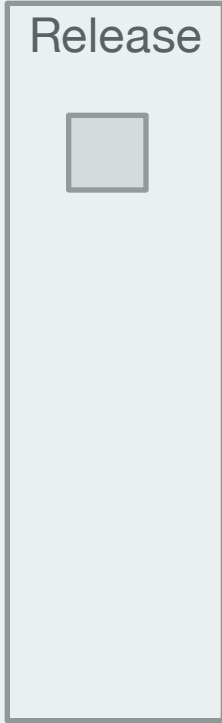

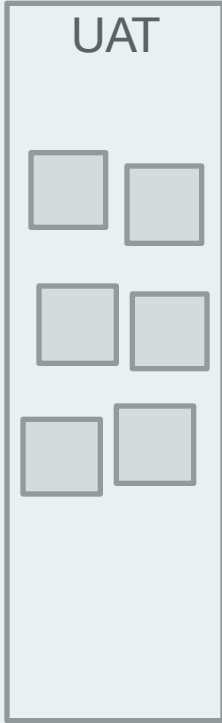

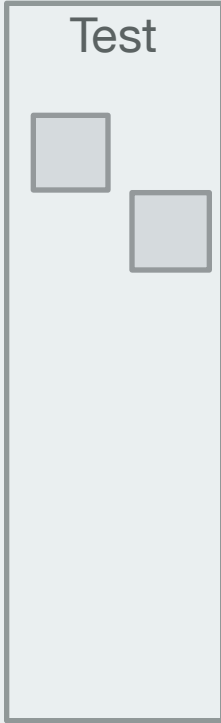

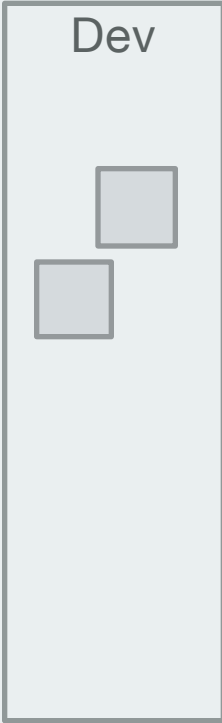

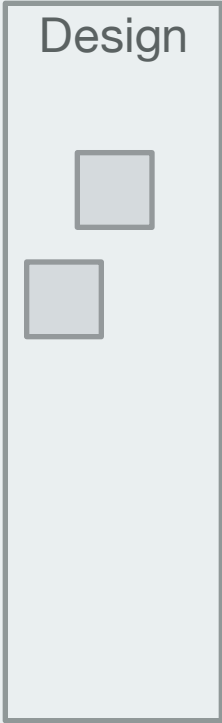

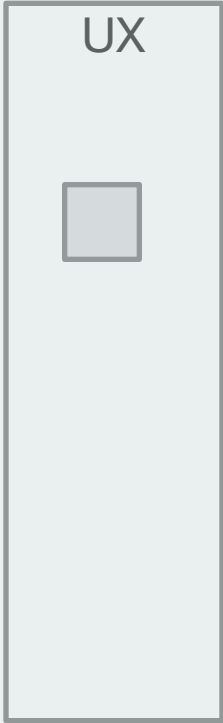

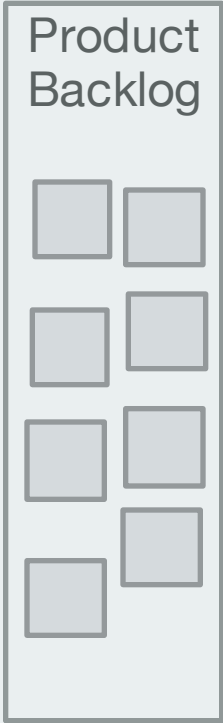

Not a process choice

You cannot do “fitness”

It cannot be standardised

Practices toward agility

See the whole

Retrospectives

Short-lived experiments

Shorten release cycles

Guided by values

It is all about the mushy stuff.

History: The Agile Manifesto

...group of people who held a set of compatible values, a set of values based on trust and respect for each other and promoting organizational models based on people, collaboration, and building the types of organizational communities in which we would want to work. At the core, I believe Agile Methodologists are really about "mushy" stuff about delivering good products to customers by operating in an environment that does more than talk about "people as our most important asset" but actually "acts" as if people were the most important, and lose the word "asset".

eXtreme Programming

Lean Software Development

Scrum

Respect
(People build software)

Communication

Commitment

Focus

(Minimise work in progress)

Simplicity

(Maximise work not done)

Transparency

Feedback

Courage

Communication

Commitment

Focus

Simplicity

Openness

Respect

Courage

Feedback

In closing

Big Bang

Agile

Improvement practices

Guided by values

Start working toward being agile!
